# Technip Energies Awarded EPCC Contract for North Field West LNG Project in Qatar

Technip Energies has been awarded a major Engineering, Procurement, Construction, and Commissioning (EPCC) contract for the North Field West (NFW) LNG project in Qatar — one of the world's largest and most strategic liquefied natural gas developments. The award reinforces Qatar's long-term position as a global LNG supplier while showcasing the importance of robust project execution by specialist contractors.

The contract scopes covers detailed engineering, procurement of major equipment, construction supervision, and commissioning support for key

processing facilities within the NFW development. Technip Energies will be responsible for delivering complex modular systems, cryogenic process trains, and associated utility infrastructure, integrating tightly with the main Owners Project Management (OPM) framework led by QatarEnergy.

North Field West is part of Qatar's broader expansion roadmap, which seeks to increase LNG production capacity from 77 mtpa to 110 mtpa by the early 2030s. The partnership with Technip Energies complements other long-lead contracts already awarded for liquefaction trains, utilities, and offsite works, highlighting the scale and collaborative nature of this multi-year program.

For oil and gas professionals, the EPCC award reflects two major industry dynamics: first, the continued expansion of LNG infrastructure amid rising global gas demand; and second, the reliance on experienced engineering contractors to manage the technical and logistical complexity of mega-projects. NFW's scale — involving multiple liquefaction trains and adjacent facilities — presents significant coordination challenges across engineering disciplines, supply chains, and workforce deployment.

Technip Energies brings deep expertise in large-scale LNG and petrochemical project delivery, with a track record of modular fabrication and cryogenic systems integration. The company's execution strategy emphasizes digital project management tools, supply chain resilience, and safety performance — all critical factors for on-time, on-budget delivery.

The NFW project will be closely monitored as LNG markets evolve, while the contract underscores strong demand for advanced EPCC expertise in large-scale gas developments.

# Iraq Signs Preliminary Agreement with Chevron for Giant West Qurna Field

Iraq has signed a preliminary agreement with Chevron to advance development plans at the massive West Qurna oil field, one of the country's largest producing assets. The non-binding accord outlines cooperation on enhanced recovery techniques, infrastructure upgrades, and long-term production optimisation aimed at sustaining and potentially increasing output from the field.

West Qurna, which holds multi-billion-barrel reserves, has been a cornerstone of Iraq's upstream portfolio. The agreement envisages Chevron collaborating with the Iraq Ministry of Oil and local partners to deploy advanced reservoir management and digital optimisation technologies, with a focus on water-injection systems, subsurface monitoring, and production efficiency. While specific financial terms and timelines remain under negotiation, both sides expressed intent to formalise a development framework agreement later in 2026.

For Iraqi authorities, the engagement with Chevron reflects efforts to attract international majors to inject capital, technology, and project execution expertise into aging fields. The West Qurna asset has faced production plateau pressures in recent years, partly due to infrastructure constraints and reservoir complexity. Chevron's involvement could accelerate recovery rates and defer decline, helping Iraq meet its export commitments.

Industry analysts note that any eventual partnership will need to address fiscal terms, cost-sharing, and risk allocation to ensure mutual commercial viability. For oil and gas professionals, the move highlights renewed international interest in Middle East upstream projects and the ongoing importance of technological collaboration to enhance recovery in mature fields.

## KBR Awarded IFMS Contract for Gigantic Majnoon Oil Field in Iraq

KBR has secured a major contract to deliver Integrated Facilities Management Services (IFMS) for Iraq's Majnoon oil field, one of the country's most valuable upstream assets and a cornerstone of its long-term production strategy. The contract award reflects increasing international engagement in revitalising Iraq's mature fields through advanced operations and maintenance support.

Under the agreement, KBR will provide IFMS across a broad spectrum of Majnoon's facilities, encompassing operational support, asset integrity management, preventive maintenance, and digital

monitoring solutions to improve overall field performance. The scope is designed to enhance reliability, reduce unplanned downtime, and optimise production processes through modernised asset management practices. The contract includes provisioning of skilled personnel, technology integration, and performance-based service delivery frameworks aligned with international standards.

Majnoon, located in southern Iraq near Basra, has historically produced hundreds of thousands of barrels per day at peak production, with considerable remaining reserves. However, like many ageing fields, it has grappled with operational inefficiencies and equipment wear that have constrained output growth. By outsourcing IFMS to KBR, the Iraqi operator aims to leverage global expertise to extend field life and improve production consistency.

KBR's IFMS approach integrates real-time data analytics, remote monitoring systems, and modern maintenance planning tools to support predictive intervention and cost optimisation. For operators and contractors, the assignment demonstrates how performance-based service models are increasingly used in complex upstream environments to manage risk, reduce lifecycle costs, and ensure continuity.

The contract also signals Iraq's ongoing efforts to diversify partnerships with international oilfield services firms as part of broader upstream investment and enhancement programmes. Government officials expressed confidence that the engagement will strengthen operational discipline and contribute to stable fiscal revenues from one of the country's most strategic oil assets.

KBR's Majnoon contract underscores rising demand for integrated management services as mature oil fields pursue modernization and sustained productivity.

## Saipem Secures \$500M Offshore Contract from Saudi Aramco

Saipem has secured a \$500 million offshore contract from Saudi Aramco, reinforcing its position as a key service provider in major Middle East energy projects. The deal covers engineering, procurement, and offshore installation services for critical subsea and topside works in Saudi Arabia's Red Sea and Arabian Gulf offshore fields.

Under the terms of the contract, Saipem will execute foundation, pipeline, and structural installation activities, as well as support fabrication and integration phases for multiple offshore platforms. The work scope is designed to enhance production capacity, improve field reliability, and support Aramco's upstream development programmes. Mobilisation is expected to begin in early 2026, with execution extending over the coming two years.

Industry analysts say the award underscores a continued focus by national oil companies on large-scale offshore development and infrastructure reinforcement, even as global energy markets navigate transition pressures and capital discipline. Saipem's track record in complex marine operations, deepwater engineering, and project delivery likely contributed to its competitive positioning for the award.

For oil and gas professionals, the contract also highlights sustained investment in offshore resources within the Middle East—an area where subsea and platform services remain critical to meeting long-term production goals.

With project mobilisation underway, Saipem and its supply chain partners will play a central role in supporting Aramco's offshore productivity and operational efficiency through 2028.

# Oman's PDO Issues Tender for Planned EPC Framework to Boost Upstream Capability

Petroleum Development Oman (PDO) has issued a major tender for a new Engineering, Procurement, and Construction (EPC) framework, signalling a significant push to enhance upstream infrastructure and project delivery capacity across Oman's key oil and gas assets. The move reflects PDO's strategic emphasis on operational efficiency, cost optimisation, and execution agility amid dynamic global energy markets.

The tender — structured as a multi-contractor EPC framework — invites qualified international and local engineering and construction firms to participate in future capital works across PDO's asset portfolio. Scope elements are expected to include surface facilities upgrades, wellhead platform expansions, flowline installations, processing plant construction, and associated utility systems. Offers will be evaluated on technical capability, local participation plans, safety and quality performance, and cost competitiveness.

PDO's planned EPC framework is designed to support a pipeline of upstream development initiatives — from reservoir exploitation and wellfield expansion to enhanced recovery facilities and digital integration projects. By establishing a pre-qualified contractor base, PDO aims to streamline procurement cycles, reduce project delivery timelines, and enhance risk management across multiple simultaneous campaigns.

For oil and gas professionals, the tender highlights broader upstream trends in the Middle East: national operators are increasingly adopting structured, long-term contracting frameworks to improve predictability and cost control. The approach also incentivises collaboration around technology transfer, local workforce development, and long-term supply chain commitments.

PDO's initiative aligns with Oman Vision 2040 objectives, which prioritise economic diversification, value maximisation from energy resources, and increased participation of Omani firms in complex engineering roles. Framework participants will be expected to demonstrate strong local content plans, workforce training programmes, and integrated project execution strategies that align with sustainability and safety standards.

Industry analysts say the framework could unlock billions in upstream contracts over the next five years, offering growth opportunities for engineering majors and regional EPC companies alike.

# OpenAI's \$110B Funding Round Draws Strategic Investment from Amazon, Nvidia, SoftBank

OpenAI has successfully closed a massive \$110 billion funding round, attracting strategic investments from tech giants including Amazon, NVIDIA, and SoftBank. The deal, one of the largest in technology funding history, underscores growing commercial and enterprise interest in advanced artificial intelligence (AI) solutions.

For the oil and gas sector, the implications are significant. AI is increasingly being leveraged for upstream and midstream optimisation — including reservoir modelling, predictive maintenance, seismic interpretation, supply chain optimisation, and real-time operations. Enhanced computational power, accelerated by investments from cloud and AI hardware providers like Amazon and Nvidia, promises breakthroughs in data analytics that can drive efficiency and cost reduction across large energy portfolios.

OpenAI's funding surge also highlights a broader shift toward AI-driven digital transformation in industrial sectors. Operators and service companies in oil and gas may benefit from enhanced machine-learning capabilities that can predict equipment failure, optimise drilling schedules, and improve energy trading strategies.

However, the rise of large AI investments also brings competitive pressures, requiring energy firms to integrate advanced capabilities or risk operational lag. Partnerships between energy players and AI providers are now being explored to build tailored solutions for fleet optimisation, emissions management, and autonomous asset workflows.

## Turkey Wealth Fund in Talks on \$10B Petrochemicals Project to Boost Energy Sector Integration

The Turkey Wealth Fund (TWF) is engaged in advanced discussions with strategic investors and international partners to develop a \$10 billion petrochemicals complex that aims to significantly expand the country's downstream energy capacity. The proposed project will integrate feedstock supply, cracker facilities, and derivative production units to serve both domestic and export markets, marking a key milestone in Turkey's energy and industrial landscape.

Under the current proposal framework, the petrochemicals complex would be located near major energy and logistics hubs to optimise access

to feedstock supplies such as ethane, propane, and naphtha — sourced from both domestic refining streams and international LNG/condensate imports. TWF officials are reportedly in talks with state actors, private equity firms, and foreign energy majors, with negotiations centered around equity structures, off-take arrangements, and technology partnerships.

For the oil and gas industry, the initiative signals a strategic shift by Turkey to move further up the value chain. Traditionally a net importer of refined products and petrochemical derivatives, Turkey aims to leverage its geographic position between Europe and Asia to become a competitive producer of polypropylene, polyethylene, and aromatics. A successful project could reduce reliance on imports, improve trade balances, and stimulate local manufacturing ecosystems tied to plastics, automotive, and packaging sectors.

Analysts also point out that the petrochemicals push complements broader global trends where producers seek integrated value capture — linking upstream hydrocarbons with high-margin downstream outputs. The complex's scale and capital intensity underscore the need for robust risk allocation, cost management, and long-term demand forecasts, especially as global markets adjust to energy transition and sustainability pressures.

Environmental considerations are expected to shape the project's final design, with TWF and partners likely incorporating energy-efficient technologies, emissions controls, and carbon management systems to meet evolving regulatory expectations in European and Gulf markets.

If realised, the \$10 billion petrochemicals complex could become a transformative asset for Turkey's energy sector — unlocking new industrial opportunities and positioning the nation as a petrochemicals hub in the broader Eurasian market.

## Kirloskar Brothers Bags ₹214 Crore Thermal Pump Supply Contracts from Adani Power Subsidiaries

Kirloskar Brothers Limited has won thermal pump supply contracts worth ₹214 crore (approximately US\$26 million) from subsidiaries of Adani Power Limited, strengthening its foothold in India's energy equipment market. The orders include advanced thermal pumps and related systems for installation in coal-fired power stations operated by Adani Power's regional units.

The scope covers boiler feed pumps, condensate extraction pumps, cooling water pumps, and auxiliary equipment that are critical for reliable steam generation and turbine performance at large thermal power plants. Kirloskar Brothers will also provide commissioning support, spare parts packages, and performance warranties, ensuring integration and reliability in high-duty operating environments.

For professionals in the oil and gas sector, this development is notable as it highlights continued capital expenditure in traditional thermal generation infrastructure. Despite the ongoing energy transition and accelerated renewable uptake, thermal power remains a key contributor to grid stability and industrial energy demand in India—particularly in areas where base-load supply is critical.

The contract win also reflects broader trends in localisation and supply-chain priorities, with domestic OEMs increasingly securing major orders for critical energy infrastructure. Equipment suppliers capable of meeting stringent performance and quality standards are well positioned to participate in upcoming opportunities across power, gas-to-power, refinery utilities, and industrial steam systems.

## Kuwait's KPC Draws BlackRock, Brookfield, EIG to Possible \$7B Pipeline Deal

Kuwait Petroleum Corporation is in advanced discussions with major global investors — including BlackRock, Brookfield Asset Management, and EIG Global Energy Partners — over a potential \$7 billion deal to develop and expand Kuwait's crude pipeline infrastructure. The proposed strategic partnership could mark a significant shift in how Gulf energy infrastructure is funded and operated.

The discussions center around modernising Kuwait's domestic and export pipeline network to enhance throughput capacity, reliability, and downstream connectivity. The expansive network plays a crucial role in transporting

crude from major producing fields such as Burgan and Minagish to coastal terminals for export and refining hubs. Upgrading these assets is seen as essential for maintaining export competitiveness and integrating Kuwait more effectively into regional energy corridors.

Under the proposed structure, KPC would retain majority ownership and operational control, while institutional investors would provide long-term capital and technical oversight. Investment partners are expected to contribute not only financing but also project management expertise and access to global energy markets. The deal's structure is designed to balance sovereign control with private sector efficiency, a model that has gained traction in recent years among national oil companies seeking to diversify risk and attract international capital.

Market analysts note that major infrastructure investments — particularly in pipelines — are increasingly financed through public-private partnerships (PPPs) and infrastructure funds, reflecting a shift in capital allocation trends. For investors, energy transportation assets offer stable, predictable cash flows backed by long-term throughput agreements, making them attractive in a low-yield environment.

For oil and gas professionals, the potential deal underscores the growing role of private capital in traditionally state-controlled energy sectors. Enhanced pipeline capacity would support Kuwait's production goals, reduce bottlenecks, and improve logistical efficiency for crude exports. It may also facilitate future projects such as refined products pipelines or cross-border connectivity with neighbouring markets.

If completed, the \$7B deal could pave the way for similar Gulf infrastructure partnerships, boosting capital access while maintaining national control and operational strength.

# Technip Energies Secures \$1B EPCC Contract Amid Continued Global Project Momentum

Technip Energies has secured a significant US\$1 billion Engineering, Procurement, Construction, and Commissioning (EPCC) contract, adding to a growing slate of awards for the company and reinforcing its leadership in delivering complex energy infrastructure projects worldwide.

The contract involves delivery of integrated engineering, procurement, and offshore installation services for a major international energy development, encompassing subsea, topside, and associated utility systems. Technip Energies will leverage its global fabrication network, advanced project execution tools, and digital delivery platforms to ensure on-budget, on-schedule performance. Execution is expected to commence in early 2026, with phased delivery extending into the mid-2020s.

Industry observers note that the award comes amid sustained investment by national oil companies and energy majors in large-scale liquefied natural gas (LNG), petrochemicals, and deepwater production infrastructure, even as global energy markets balance supply growth with transition imperatives. Large EPCC contracts of this scale signal continued confidence in long-cycle capital projects and underscore the strategic importance of partnering with experienced engineering contractors capable of managing technical complexity and supply chain risk.

For oil and gas professionals, the contract win highlights the ongoing demand for high-end project delivery expertise across multiple energy segments. As owners prioritise execution certainty and risk mitigation, trusted EPCC partners like Technip Energies stand to play a central role in advancing next-generation energy assets.

## Excellence Integrity Management (EIM) Now Offering Digital Marketing Services for Oil & Gas Vendor Companies

As the oil & gas industry evolves, businesses are increasingly leveraging digital marketing to enhance their brand presence, attract clients, and stay competitive in a rapidly changing market. Excellence Integrity Management (EIM) is now offering specialized digital marketing services tailored for Oil & Gas Vendor Companies, helping them expand their reach, generate high-quality leads, and establish a strong online presence.

### Why Digital Marketing is Essential for Oil & Gas Vendors

Traditionally, oil & gas vendor companies relied on trade shows, networking events, and referrals to secure business opportunities. However, in today's digital-first landscape, companies need a strong online presence to effectively engage with industry stakeholders, showcase expertise, and stay ahead of the competition.

### How EIM Helps Oil & Gas Vendors Dominate the Digital Space

With deep industry knowledge and expertise in digital marketing, EIM offers a unique advantage for oil & gas vendors looking to stand out in the competitive market.

#### With EIM's digital marketing solutions, vendors can

**INCREASE BRAND VISIBILITY**  
Position their business as a key player in the industry.

**ENHANCE INDUSTRY ENGAGEMENT**  
Build authority through thought leadership content.

**GENERATE QUALIFIED LEADS**  
Reach the right audience with targeted campaigns.

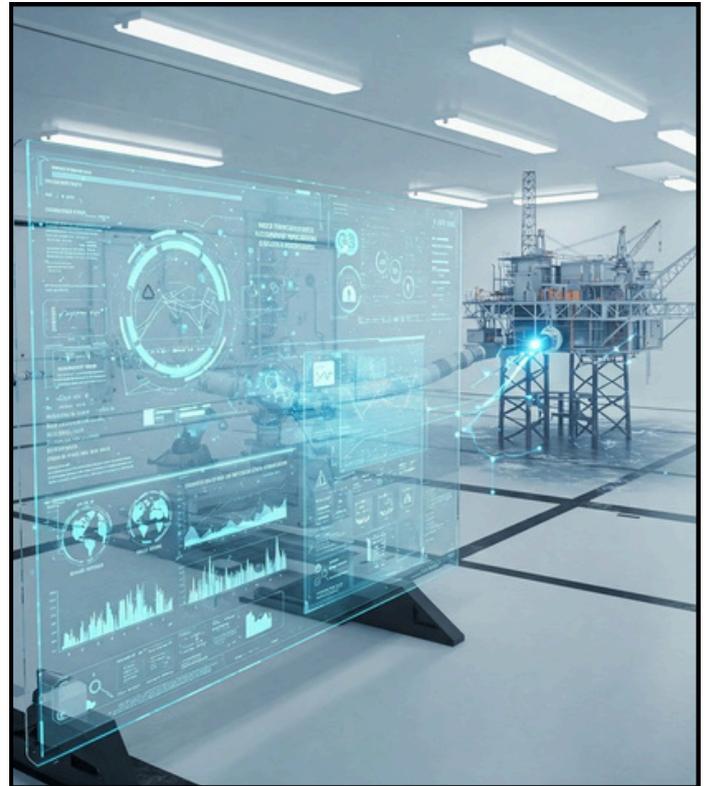

**BOOST CONVERSIONS & ROI**  
Transform online traffic into business growth.

## How EIM Helps Oil & Gas Vendors Dominate the Digital Space

With deep industry knowledge and expertise in digital marketing, EIM offers a unique advantage for oil & gas vendors looking to stand out in the competitive market. Our data-driven approach ensures:

- ◆ Industry-Specific Marketing Strategies – Tailored solutions designed for B2B oil & gas businesses.
- ◆ Data-Driven Campaigns – Insights-driven marketing that delivers measurable results.
- ◆ Proven Success in the Oil & Gas Sector – Years of experience helping energy companies grow.

### Take Your Business to the Next Level with EIM

*Whether you're an equipment supplier, service provider, or technology vendor in the oil & gas industry, EIM's digital marketing expertise can help you drive business growth and industry recognition.*

# Experienced.

## But Still Professionally Stuck?

### 1:1 Career Acceleration Mentoring for Inspection, Corrosion and Asset Integrity Professionals

This is not training.  
It's structured, confidential mentoring  
focused on real engineering judgment,  
confidence, and career progression.

- ✓ Rebuild confidence in technical decisions
- ✓ Improve decision-making under pressure
- ✓ Prepare for senior and leadership roles
- ✓ Clearly defend your judgment in reviews and audits

8 or 12 Weeks | Weekly 1:1 Sessions | Online

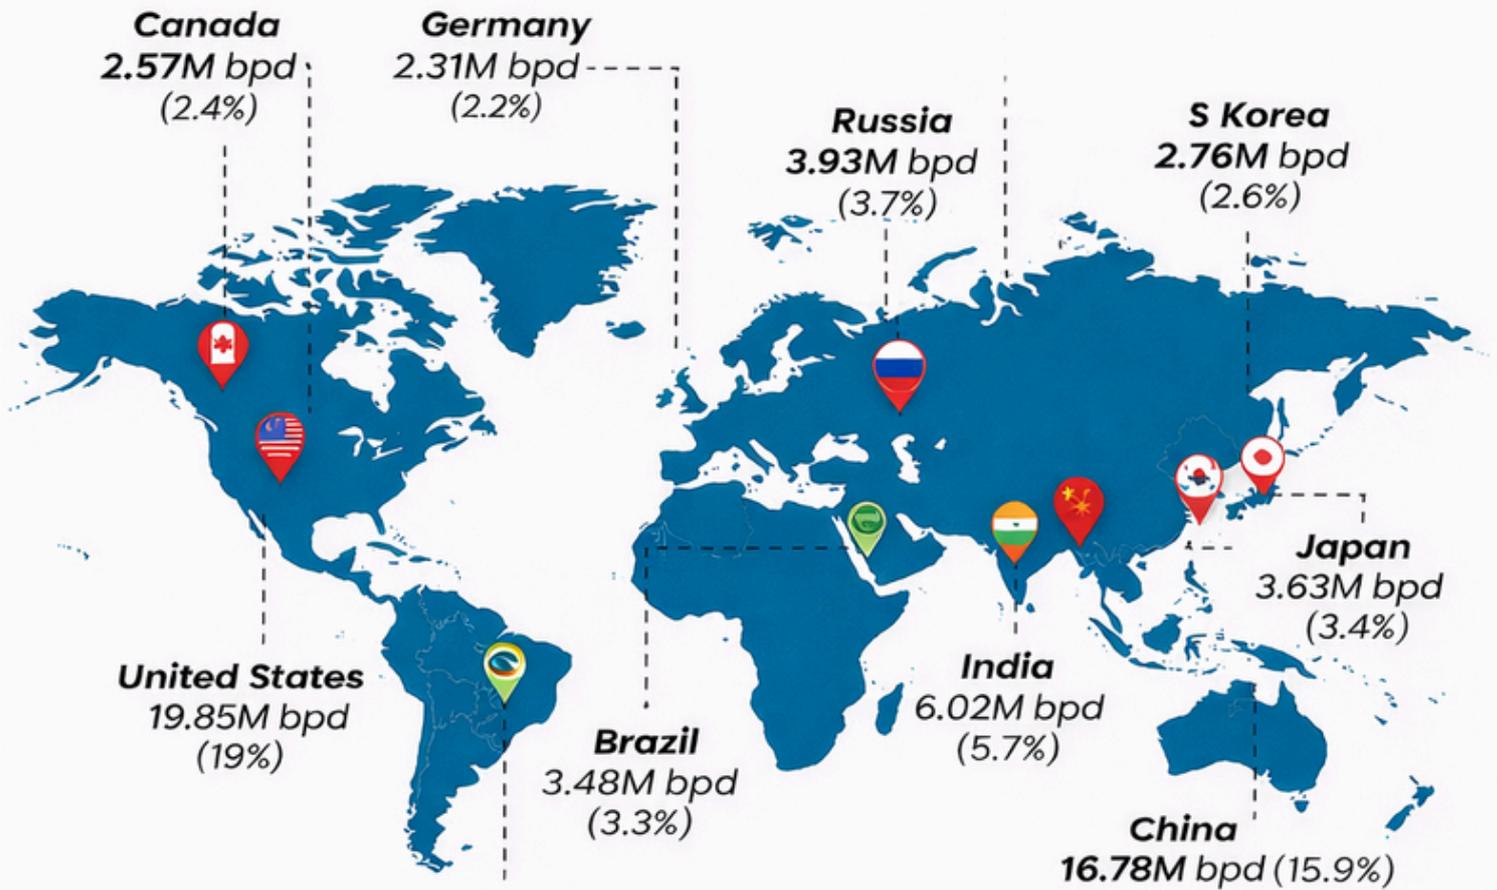

Feeling stuck in your career?

Reply "YES" for details

# WORLD'S LARGEST OIL CONSUMERS

Source: U.S. EIA and International Energy Statistics

**Total World Oil Consumption:**  
105.5M barrels per day [bpd]

## LOOKING TO REACH A HIGHLY ENGAGED AUDIENCE

Advertise your brand through our monthly newsletter!

### Why Choose Us?
